

## **COVID-19 Protocol Version 1.0 (Website)**

### **CARE**

For the purpose of this document, the term 'care' includes

- Providing personal/intimate care
- Supporting a young person with medication
- Supporting a young person to access food and drink
- Supporting learners to move around college

Where possible contact should be minimised and socially distancing should be adhered to, however the nature of the support mentioned above means that there is a greater need to be in close contact with a learner.

Full PPE should be worn in these circumstances and will be provided.

Disposable PPE to be replaced after each use (face shields are not disposable and should be cleaned by the user regularly with antiviral wipes provided).

Where equipment is required - such as a hoist - it is to be cleaned before each use.

Hands should be sanitized before and after 'care' is provided, both by the learner and the person providing the care.

Learners who have an Individual Health Care Plan (IHP) or a Personal Care Plan (PCP) will have this updated to reflect the current COVID situation.

All Care will be documented on the relevant documents.
